- Do not re-squeeze residues expelled through the pulp outlet. Soft fruits can be re-squeezed.
- Do not operate the appliance before putting in the ingredients.

These are molding marks resulting from the normal manufacturing process. This is a normal product and there is no problem for use.

### Juice leaks over the base.

Have you inserted a lot of ingredients into the hopper chute? If you insert a large amount of ingredients compared to the pulp outllet, the packing is slightly pushed away, so the juice leaks out of the gap. Do not put too much ingredients by force and just put gradually for extraction.

### The Chamber shakes when squeezing.

Slight shaking may be caused by the motor.

Depending on the texture of the ingredient, there may be slight to more pronounced shaking of This is a normal phenomenom as auger rotates and it is not a malfunction. Hard ingredients (e.g carrot, potato, radish, beet, etc.) may cause more shaking than soft ingredients.
