## ⚠ CAUTIONS DURING OPERATION

### ● Ingredients which needs caution

- Fruits with hard seeds such as persimmon, Japanese apricot, lemon, plum, peach etc. that are hard to chew with our teeth should be pitted before extraction.

- For stalk vegetables with strong fiber such as water parsleys, celery etc. cut them into small size about 3--4cm before putting them into the hopper chute.

- Do not put in fruits preserved in alcohol, sugar, honey, etc. (grapes, apricot, berries, etc) and enzymes (glasswort, houseleek, etc.). It may cause damage or failure.

● We recommend you drink green vegetable juice and fruit juice immediately after extraction rather than keeping them for long time.

● You may use for crushing spice (garlic, red pepper), but not for grinding grain. It may cause damage or failure.

● Do not re-squeeze residues expelled through the pulp outlet. Soft fruits can be re-squeezed.

● Do not operate the appliance before putting in the ingredients.

● Do not use the appliance for more than 30 minutes continuously.

- It may cause a failure due to overheating of the motor.  
When using continuously, stop it and leave it 5 minutes of interval and then you may use it again.

● Never insert finger, fork or spoon etc. into juice outlet during the operation.

- Inserting such as chopsticks etc. into juice outlet during operation may cause them stuck in the spinning brush and may cause damage of parts.

● Do not press the ingredients with anything except the pusher.

-It may stuck to the squeezing screw and cause injury and failure.

● Do not operate the switch with wet hands.

- It may cause electric shock or fire. Do not put foreign objects near the switch.

If you insert a large amount of ingredients compared to the pulp outlet, the packing is slightly pushed away, so the juice leaks out of the gap. Do not put too much ingredients by force and just put gradually for extraction.

#### **The Chamber shakes when squeezing.**

Slight shaking may be caused by the motor.

Depending on the texture of the ingredient, there may be slight to more pronounced shaking of This is a normal phenomenon as squeezing screw rotates and it is not a malfunction. Hard ingredients (e.g carrot, potato, radish, beet, etc.) may cause more shaking than soft ingredients.
